

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A voltage conversion apparatus converting a direct current voltage from a DC power supply into an output voltage such that said output voltage is equal to a designated voltage, comprising:

a voltage converter altering a voltage level of said direct current voltage to provide an output voltage,

a detection unit detecting the output voltage output from said voltage converter, and

a control unit controlling said voltage converter based on said detected output voltage and said designated voltage, wherein a transient response property of said voltage converter such that a follow-up property of said output voltage with respect to said designated voltage in feedback control is consistent with a reference transient response property, and said output voltage is equal to said designated voltage, based on said detected output voltage and said designated voltage.

2. (Currently Amended) The voltage conversion apparatus according to claim 1, wherein

said voltage converter includes a chopper circuit,

said control unit comprises

a feedback voltage control value calculation unit detecting a difference between said output voltage and said designated voltage to determine a control gain in said feedback control in accordance with the detected difference, and calculating a feedback voltage control value in said feedback control such that said transient response follow-up property is equal to

said reference transient response property based on the determined control gain, said output voltage, and said difference,

a duty ratio calculation unit calculating a switching duty ratio of said chopper circuit, based on said calculated feedback voltage control value, and

a switching signal generation unit generating a switching signal having said switching duty ratio, and providing the generated switching signal to said chopper circuit.

3. (Currently Amended) The voltage conversion apparatus according to claim 2, wherein said feedback voltage control value calculation unit calculates said feedback voltage control value by correcting a feedback preliminary voltage control value calculated using said control gain such that said transient response follow-up property is equal to said reference transient response property.

4. (Currently Amended) The voltage conversion apparatus according to claim 3, wherein said feedback voltage control value calculation unit comprises

a subtracter calculating a difference between said output voltage and said designated voltage,

a gain determination unit determining said control gain based on said difference,

a computing element calculating said feedback preliminary voltage control value based on said determined control gain, and

a corrector correcting said feedback preliminary voltage control value by converting said output voltage into a reference voltage where said transient response follow-up property is equal to said reference transient response property to output said feedback voltage control value.

5. (Previously Presented) The voltage conversion apparatus according to claim 4, wherein said corrector calculates a ratio of said reference voltage to said output voltage, and multiplies the calculated result by said feedback preliminary voltage control value to correct said feedback preliminary voltage control value.

6. (Currently Amended) The voltage conversion apparatus according to claim 2, wherein said feedback voltage control value calculation unit calculates said feedback voltage control value by correcting said difference such that said transient response follow-up property is equal to said reference transient response property.

7. (Currently Amended) The voltage conversion apparatus according to claim 6, wherein said feedback voltage control value calculation unit comprises

- a subtracter calculating a difference between said output voltage and said designated voltage,
- a corrector correcting said difference such that said transient response follow-up property is equal to said reference transient response property,
- a gain determination unit determining said control gain based on said difference, and
- a computing element calculating said feedback voltage control value based on said determined control gain and said corrected difference.

8. (Currently Amended) The voltage conversion apparatus according to claim 7, wherein said corrector corrects said difference by converting said output voltage into a reference voltage where said transient response follow-up property is equal to said reference transient response property.

9. (Previously Presented) The voltage conversion apparatus according to claim 8, wherein said corrector calculates a ratio of said reference voltage to said output voltage, and corrects said difference by multiplying the calculated result by said difference.

10. (Currently Amended) The voltage conversion apparatus according to claim 1, wherein

said voltage converter includes of a chopper circuit,

said control unit comprises

a feedback voltage control value calculation unit detecting a difference between said output voltage and said designated voltage to determine a control gain in said feedback control in accordance with the detected difference, and calculating a feedback preliminary voltage control value in said feedback control based on the determined control gain, said output voltage, and said difference,

a duty ratio calculation unit calculating a switching duty ratio of said chopper circuit such that said transient response follow-up property is equal to said reference transient response property, based on said calculated feedback preliminary voltage control value and said output voltage, and

a switching signal generation unit generating a switching signal having said switching duty ratio, and providing the generated switching signal to said chopper circuit.

11. (Currently Amended) The voltage conversion apparatus according to claim 10, wherein said duty ratio calculation unit calculates said switching duty ratio by correcting a preliminary duty ratio calculated using said feedback preliminary voltage control value such that said transient response follow-up property is equal to said reference transient response property.

12. (Currently Amended) The voltage conversion apparatus according to claim 11, wherein said duty ratio calculation unit comprises

a computing element calculating said preliminary duty ratio in accordance with said feedback preliminary voltage control value, and

a corrector correcting said preliminary duty ratio such that said transient response property is equal to said reference transient response property.

13. (Currently Amended) The voltage conversion apparatus according to claim 12, wherein said corrector corrects said preliminary duty ratio by converting said output voltage into a reference voltage where said transient response follow-up property is equal to said reference transient response property.

14. (Previously Presented) The voltage conversion apparatus according to claim 13, wherein said corrector calculates a ratio of said reference voltage to said output voltage, and corrects said preliminary duty ratio by multiplying the calculated result by said preliminary duty ratio.

15. (Currently Amended) A voltage conversion method of converting a direct current voltage from a DC power supply into an output voltage under feedback control such that said output voltage is equal to a designated voltage, said method comprising:

a first step of detecting said output voltage,

a second step of detecting a difference between said designated voltage and said output voltage,

a third step of determining a control gain in accordance with said detected difference,
and

a fourth step of converting said direct current voltage, based on said determined control gain, said detected difference, and said detected output voltage, into said output voltage ~~such that a follow-up property, wherein a transient response property~~ of said output voltage with respect to said designated voltage in said feedback control is consistent with a reference transient response property, and said output voltage is equal to said designated voltage, ~~based on said determined control gain, said detected difference, and said detected output voltage~~.

16. (Currently Amended) The voltage conversion method according to claim 15,
wherein

said direct current voltage being converted into said output voltage by a chopper circuit,

said fourth step comprises

a first substep of calculating a feedback voltage control value that causes said transient response follow-up property to match said reference transient response property in said feedback control, based on said control gain, said difference, and said output voltage,

a second substep of calculating a switching duty ratio of said chopper circuit using said feedback voltage control value, and

a third substep of controlling said chopper circuit such that said output voltage is equal to said designated voltage, based on said switching duty ratio.

17. (Original) The voltage conversion method according to claim 16, wherein said first substep includes

the step of calculating a feedback preliminary voltage control value in said feedback control based on said control gain and said difference, and

the step of calculating said feedback voltage control value by correcting said feedback preliminary voltage control value using said output voltage.

18. (Currently Amended) The voltage conversion method according to claim 17, wherein said step of calculating said feedback voltage control value includes

the step of calculating a conversion ratio required to convert said output voltage into a reference voltage where said transient response follow-up property is equal to said reference transient response property, and

the step of multiplying said feedback preliminary voltage control value by said conversion ratio to calculate said feedback voltage control value.

19. (Currently Amended) The voltage conversion method according to claim 16, wherein said first substep includes

the step of calculating a correction difference where said transient response follow-up property is equal to said reference transient response property by correcting said difference using said output voltage, and

the step of calculating said feedback voltage control value based on said control gain and said correction difference.

20. (Currently Amended) The voltage conversion method according to claim 19, wherein said step of calculating said correction difference includes

the step of calculating a conversion ratio required to convert said output voltage into a reference voltage where said transient response follow-up property is equal to said reference transient response property, and

the step of multiplying said difference by said conversion ratio to calculate said correction difference.

21. (Currently Amended) The voltage conversion method according to claim 15, wherein said direct current voltage being converted into said output voltage by a chopper circuit,

said fourth step comprises

a first substep of calculating a feedback preliminary voltage control value in said feedback control based on said control gain and said difference,

a second substep of calculating a preliminary switching duty ratio of said chopper circuit based on said feedback preliminary voltage control value,

a third substep of correcting said preliminary switching duty ratio using said output voltage to calculate a switching duty ratio where said transient response follow-up property is equal to said reference transient response property, and

a fourth substep of controlling said chopper circuit such that output voltage is equal to said designated voltage, based on said switching duty ratio.

22. (Currently Amended) The voltage conversion method according to claim 21, wherein said third substep includes

the step of calculating a conversion ratio required to convert said output voltage into a reference voltage where said transient response follow-up property is equal to said reference transient response property, and

the step of multiplying said preliminary switching duty ratio by said conversion ratio to calculate said switching duty ratio.

23. (Currently Amended) A computer-readable recording medium with a program recorded thereon to allow a computer to execute control of voltage conversion of converting a direct current voltage from a DC power supply into an output voltage under feedback control such that said output voltage is equal to a designated voltage, said computer executing:

a first step of detecting said output voltage,

a second step of detecting a difference between said designated voltage and said output voltage,

a third step of determining a control gain in accordance with said detected difference, and

a fourth step of converting said direct current voltage, based on said determined control gain, said detected difference, and said detected output voltage, into said output voltage ~~such that a follow-up property, wherein a transient response property~~ of said output voltage with respect to said designated voltage in said feedback control is consistent with a reference transient response property, and said output voltage is equal to said designated voltage, ~~based on said determined control gain, said detected difference, and said detected output voltage.~~

24. (Currently Amended) The computer-readable recording medium recorded with a program thereon to be executed by a computer according to claim 23, wherein

said direct current voltage being converted into said output voltage by a chopper circuit,

said fourth step comprises

a first substep of calculating a feedback voltage control value that causes said transient response~~follow-up~~ property to match said reference transient response property in said feedback control, based on said control gain, said difference, and said output voltage,

a second substep of calculating a switching duty ratio of said chopper circuit using said feedback voltage control value, and

a third substep of controlling said chopper circuit such that said output voltage is equal to said designated voltage, based on said switching duty ratio.

25. (Original) The computer-readable recording medium recorded with a program thereon to be executed by a computer according to claim 24, wherein said first substep includes

the step of calculating a feedback preliminary voltage control value in said feedback control based on said control gain and said difference, and

the step of calculating said feedback voltage control value by correcting said feedback preliminary voltage control value using said output voltage.

26. (Currently Amended) The computer-readable recording medium recorded with a program thereon to be executed by a computer according to claim 25, wherein said step of calculating said feedback voltage control value includes

the step of calculating a conversion ratio required to convert said output voltage into a reference voltage where said transient response~~follow-up~~ property is equal to said reference transient response property, and

the step of multiplying said feedback preliminary voltage control value by said conversion ratio to calculate said feedback voltage control value.

27. (Currently Amended) The computer-readable recording medium recorded with a program thereon to be executed by a computer according to claim 24, wherein said first substep includes

the step of calculating a correction difference where said transient response follow-up property is equal to said reference transient response property by correcting said difference using said output voltage, and

the step of calculating said feedback voltage control value based on said control gain and said correction difference.

28. (Currently Amended) The computer-readable recording medium recorded with a program thereon to be executed by a computer according to claim 27, wherein said step of calculating said correction difference includes

the step of calculating a conversion ratio required to convert said output voltage into a reference voltage where said transient response follow-up property is equal to said reference transient response property, and

the step of multiplying said difference by said conversion ratio to calculate said correction difference.

29. (Currently Amended) The computer-readable recording medium recorded with a program thereon to be executed by a computer according to claim 23, wherein

said direct current voltage being converted into said output voltage by a chopper circuit,

said fourth step comprises

a first substep of calculating a feedback preliminary voltage control value in said feedback control based on said control gain and said difference,

a second substep of calculating a preliminary switching duty ratio of said chopper circuit based on said feedback preliminary voltage control value,

a third substep of correcting said preliminary switching duty ratio using said output voltage to calculate a switching duty ratio where said transient response ~~follow-up~~ property is equal to said reference transient response property, and

a fourth substep of controlling said chopper circuit such that output voltage is equal to said designated voltage, based on said switching duty ratio.

30. (Currently Amended) The computer-readable recording medium recorded with a program thereon to be executed by a computer according to claim 29, wherein said third substep includes

the step of calculating a conversion ratio required to convert said output voltage into a reference voltage where said transient response ~~follow-up~~ property is equal to said reference transient response property, and

the step of multiplying said preliminary switching duty ratio by said conversion ratio to calculate said switching duty ratio.
